ABSTRACT

A report on transience and stability has been published by the Los Angeles Unified School District (California) for almost 3 decades. "Transiency" refers to the number of students who enter and leave during the school year, and is expressed as a percentage (rate). Stability refers to the student population that has remained in the school all year, and is expressed as a percentage of the starting enrollment. The formulas used for computing transiency and stability rates since 1987-88 include interstate transfers. In addition, there are fluctuations in data due to new school programs and school reconfigurations, such as changes from junior highs to middle schools, that should be considered when interpreting data. As in previous years, information has been gathered from all regular schools, special education schools, and schools of choice. Rankings were computed for each group with a district summary. The data suggest that schools of choice had the highest stability and lowest transiency rates. Conversely, senior high schools had the highest transiency and lowest stability rates. (Contains 10 tables and 2 figures.) (Author/SLD)

Abstract

The Los Angeles Unified School District (LAUSD) Transiency and Stability Report has been published by the Program Evaluation and Research Branch for almost three decades.

Transiency refers to the number of students who enter and leave during the school year, and is expressed as a percentage (rate). Stability refers to the student population that has remained in the school all year, and is expressed as a percentage (rate) of the starting enrollment.

The formulas used for computing transiency and stability rates since 1987-88 include interstate transfers whereas earlier formulas do not. In addition, there are fluctuations in data due to new school programs and school reconfigurations (such as changes from junior highs to middle schools) that should be considered when interpreting the data.

As in previous years, information has been gathered from all regular schools, special education schools, and schools of choice. Rankings were computed for each group with a district summary.

The data suggest that schools of choice had the highest stability and lowest transiency rates. Conversely, senior high schools had the highest transiency and lowest stability rates.

Background Information and Introduction

The Program Evaluation and Research Branch (PERB) (formerly, Research and Evaluation Branch) of Los Angeles Unified School District (LAUSD) publishes a report that describes student transiency and stability relative to school enrollment for a one year period.

Because transiency and stability are not reciprocal concepts, the sum of their rates is not required to equal 100%. Each concept is computed separately, although some counts of students are common to both formulas.

The stability formula does not include leavers in the 1st school month, nor graduates advancing from one grade to the next. The formula for computing transiency and stability was revised in 1987-1988 to include interstate transfers.

It is important to note that fluctuations in annual transiency and stability rates reflect more than ordinary entering and leaving. For example, changes in attendance patterns may result from new school programs or reconfigured grades. Therefore, small shifts in the rates for individual schools may be in response to extraneous factors. Large group data, such as cluster or district totals, may reflect the most accurate and balanced index of transiency and stability.

Transiency and stability rates for special education schools continue to appear in this report. Because special education schools have different attendance patterns than the majority of schools, they do not appear in district totals. Carlson Hospital has an unusual pattern of entrants and leavers; therefore its counts are not included in the special education summary.

Data for continuation and opportunity high schools, alternative education (except for alternative schools) and work centers, community adult schools, skills centers, and children's centers are not collected for this report because of either atypical patterns of entering and leaving or duplication of student counts.

Definitions

Entrants (E) in this report are students entering during the school year, with the exception of those returning to the same school at the beginning of the school year (E1).

Categories of entering students included in this study are:

- E2 entering from another school within LAUSD
- E3 entering from another California public school outside LAUSD
- E4 entering from a nonpublic school in California
- E5 entering from a school in another state or country
- E7 enrolling for the first time (generally kindergarten or 1st grade)

Leavers (L) in this study are students leaving any time during the school year, except those graduating (L7) and those leaving one grade or program to enter another in the same school (L1).

Categories of leaving students included in this report are:

- L2 leaving for another LAUSD school
- L3 leaving for another California public school outside LAUSD
- L4 leaving for a nonpublic school in California
- L5 leaving for a school in another state or country
- L8 leaving without giving the school enough information about destination or reasons; thus, categorized as unknown, dropped, or other

Rank refers to ordering the transiency and stability rates for schools or groups of schools listed in Tables 1 through 6, with the highest rate receiving rank 1. Thus, rank 1 for stability indicates greatest holding strength, but rank 1 for transiency indicates the highest mobility. Each table contains unique rankings within its pattern that cannot be directly compared to other years' rankings.

Rate refers to the percentage term calculated by the formulas for stability and transiency. A school with a high stability rate and a low transiency rate has excellent holding power.

School Month refers to a period of 4 weeks or 20 school days. There are 10 school months in 1 school year, usually covering about 9 calendar months.

School Year: see School Month.

Schools of Choice are part of the district's voluntary integration program. Each program emphasizes a particular field of interest such as science, performing and fine arts, or business. Gifted and high-achieving students may choose to study in programs that emphasize accelerated learning and creativity.

Stability estimates the student population that has remained in the school all year. Stability is computed by subtracting all school-year leavers from the starting enrollment, and is expressed as a percentage (rate) of the starting enrollment. (See Formulas, below.) In effect, the stability rates in this report answer the question, "How many of those students who began the year at ..... School were still there at the end of the year?" For example, if School X had a beginning enrollment of 1,000 and a stability rate of 80.00%, and 200 students left the school during the school year; 800 students who attended School X during the first month of school were still there at the end of the school year.

Transiency refers to the adjusted number of entrants and leavers for the year. Transiency is computed by adding the numbers of entrants and leavers (as defined in the next section) and dividing them by the school's average enrollment. Therefore, transiency is expressed as a percentage (rate) of the 10-month enrollment averaged. (See Formulas, below.) The transiency rate answers the question, "During the academic year, not including the first month of school, what was the movement in and out of .... School?" For example, if, in School Y which had an average of 1,000 students attending during the 1997-98 year, 70 students entered and 30 students left after the first month of the school year, then School Y's transiency rate would be 10.00%. This means that 10% (as the percentage of the average enrollment) of the students that attended School Y during 1997-98 either entered or left during that year.

Formulas

The formulas for stability and transiency are explained as follows:

Symbols Used

AVG average enrollment of 10 school months (i.e., sum of enrollment of month 1, month 2, ...month 10, divided by 10)

E adjusted number of entrants for the school year: this includes all E2, E3, E4, E5, and E7 students for school months 2-10; excludes all Es in month 1; excludes all E1 students for months 2-10

L adjusted number of leavers for the school year: this includes all L2, L3, L4, L5, and L8 students for school months 2-10; excludes all Ls in month 1; excludes all L1 students for months 2-10

M1 enrollment for school month 1

S stability rate for school year

T transiency rate for school year

Formula for Stability

Stability equals enrollment for school month 1 less adjusted number of leavers divided by enrollment for school month 1, times 100--yielding a percentage term, the stability rate.

$$S = \frac{M1 - L}{M1} \times 100$$

Formula for Transiency

Transiency equals adjusted number of entrants plus adjusted number of leavers divided by the average enrollment for the 10 school months, times 100--yielding a percentage term, the transiency rate.

$$T = \frac{E + L}{AVG} \times 100$$

Notes about the formulas:

- All Es and Ls in school month 1 are excluded from consideration as separate categories because they are already represented in the M1 baseline enrollment.
- "Adjusted number" refers to the inclusion or exclusion of types of E and L students, listed under Symbols Used.
- Es include the E5 category.
- Ls include the L5 category.
- S cannot be calculated if M1 = 0. No stability rate will appear, and a starred footnote will explain: "Value cannot be calculated because denominator = 0."
- S cannot be validly calculated when M1 < L. No stability rate will appear, and a starred footnote will explain: "Value was less than zero." This condition is possible for a school with an unusual pattern of entrants and leavers. The school may offer highly specialized services to enrollees. Students begin their school year elsewhere but, after their exceptional needs have been identified, transfer to the special school. If the services are short-term,

many students will rotate through the program during the year and return to their home schools.

Thus, the special school's opening M1 enrollment can be zero or extremely low relative to unduplicated counts of entrants and leavers later in the year. By program default, the last rank available within the school group is assigned to the "M1 < L" school. See Carlton Hospital or Junior High (JH) Assistance program.

Using the Tables

Overview results for the District appear in Table 1 and Figures 1 and 2, and results for elementary schools, middle schools, senior high schools, special education, and schools of choice follow in Tables 2 through 6. The schools are listed in alphabetical order, with numeric schools first in the sequence.

For Tables 1 through 6, the headings are explained in the Definitions section of this report. Please note that entrants and leavers represent accumulated totals for the entire school year.

Summary rates for transiency and stability since 1968 are shown in Tables 7 through 10. Rates are directly comparable within each table, but not between tables, because formulas were changed periodically to improve validity.

Findings

In the 1997-98 academic year, the trend of increasing districtwide stability rates and decreasing districtwide transiency rates reported in the 1996-97 Transiency and Stability Report continued. The 1997-98 stability rate was 81.27%, slightly higher than the 1996-97 rate of 80.66%. The 1997-98 transiency rate was 33.72%, slightly lower than the 1996-97 rate of 34.76%.

Over the last ten years, there has been a greater change in the transiency and stability rates than that reflected above. In 1988-89, the transiency rate was 42.02% and the stability rate was 77.39%. The lowest stability rate of the last ten years was reported in 1992-93, during which the stability rate was 74.63%. The highest reported transiency rate was 46.62%, in 1991-92.

In 1997-98, the schools of choice as a whole reported the highest stability rates (93.13%) and the lowest transiency rates (8.84%) (Table 1, page 6). Conversely, senior high schools reported the lowest stability rates (74.50%) and the highest transiency rates overall (41.28%).
